SUBJECT: Low Water Below Barkley Dam

Due to extremely low flow conditions and the reduction of storage at Wolf Creek and Center Hill Dams, the Nashville District will not be able to release water at Barkley to maintain a minimum tailwater elevation of 302.0 if Ohio River levels are low. Until further notice, Barkley Dam will not generate off schedule to keep the tailwater above 302.0.

Shippers are urged to check with the lock before entering the lower Cumberland River. If necessary, it may be possible to provide an additional 6000 cfs for four hours to help shippers transit the reach between Iuka Bend and the dam.

FOR THE DISTRICT ENGINEER:
